FOR IMMEDIATE RELEASE

CIVIL AVIATION AUTHORITY OF SINGAPORE TRAINING

HOSTED BY NAMIBIA CIVIL AVIATION AUTHORITY

It is my privilege and honour as the Executive Director of the NCAA to announce the commencement of in-house training of Auditing Techniques and Best Practices course presented in Windhoek by Singapore Aviation Academy, of the Civil Aviation Authority of Singapore, which is aligned to our safety commitments and safety and security oversight mandate.

The Auditing Techniques and Best Practices course will provide essential skills to NCAA inspectors to implement their safety oversight mandates and to industry to improve quality systems.

By hosting this course, the NCAA aims to build capacity in aviation safety operations within the aviation industry and further adhere and improve in the global standardization, harmonization, and enhancing competence in the aviation safety requirements, which ultimately increase the States' effective level of implementation (EI). The Auditing Techniques and Best Practices initiative acknowledges and enhances the importance of auditing in flight safety provisioning, enabling effective compliance and addressing a key risk factor identified in recent accident and incident trending.

After completion of this course, participants will have a comprehensive theoretical and practical understanding of auditing requirements and responsibilities; be able to identify and mitigate threats related to findings and root causes; take a proactive approach towards safety oversight and quality systems, and implement effective safety surveillance actions.

NCAA promotes and supports the establishment of effective quality systems throughout its service providers and through strengthening their own and their service provider's capacity will enhance safety and quality of the industry as a whole. As a united front this initiatives intends to take the necessary measures to enhance safety and security, and through this the NCAA calls upon the industry and the regulator combined to lead the collaborative efforts required to reduce safety and security related accidents and incidents within Namibia.

The Civil Aviation Authority of Singapore (CAAS) is an internationally renowned aviation training provider representing a vast wealth of experience presenting courses around the globe and promoting excellence in the aviation industry. CAAS works with governments, regional safety oversight organisations such as the African Civil Aviation Commission (AFCAC), experts, and international organizations like ICAO to develop programmes and best practices that advance aviation standards globally.

Pursuant to the Civil Aviation Act, 2016 (Act No.6 of 2026), the NCAA is mandated to oversee the functioning and development of the civil aviation industry in an effective and economical manner with due regard given to the maintenance of standards in the civil aviation industry. It is against this background that the NCAA continues to promote and advocate for in-house training programs such as this to foster greater participation by all our local stakeholders to meet international standards. The NCAA is planning to host more

of such courses depending on the need as part of our mandate. Interested parties and requests are welcomed.

The NCAA will again host this course with CAAS in September with the support of AFCAC to host 20 delegates from Civil Aviation Authorities throughout the African aviation region.
